I am writing to publicly comment on the use of railroad trains and tracks in our area to carry on a politically motivated threat campaign on behalf of Donald Trump and the Republican Party that he represents.

For at least two years now, the railroad tracks immediately near our home have been used to drive trains through our area with the intention of expressing the power of Donald Trump's influence over our hometown of San Antonio, Texas. These trains are not only being cued up to coincide with threatening messages, but they are also being used to 'blast' powerful air horns into our home environment as one form of the ongoing private nuisance that we are experiencing from Donald Trump's illegal use of government power.

As I have been publicly expressing, we are being subjected to an ongoing campaign of spying and intimidation from inside of the United States government and the railroad traffic near our home is one way in which this campaign of intimidation is being waged against us.

I am writing these comments for City Council to consider as they readily consent to funding this very same railway company with \$200,000 for the construction of additional facilities in San Antonio, Texas.

The current facilities near our home are being used to drive in the message that the 'Trump Train' of Donald Trump politics is large enough and powerful enough to control the trains that operate around my home. I am advising the city against funding any new facilities for a railroad that is using its existing facilities in this harmful way.

I hope that this message is influential in dissuading our City Council from continuing to employ the services of companies that are being used by Donald Trump to display his 'heavy machinery' and 'Trump Train power' around San Antonio, Texas. There is absolutely no place in National, State, County, or City politics for heavy machinery to be used as a tool of intimidation against our right to express our political speech.
